

Rationale

Today a minimum part of the potential of ICT for supporting innovative pedagogical developments and acquisition of key competences, have been implemented in the lifelong learning sector. The BACH project aims to develop and analyse an innovative pedagogy and assessment approach, based on the Open Educational Resources, to support the diverse individual learning pathways and to better assess all types of learning outcomes and future learning needs. As noted by Susan D'Antoni (Head of UNESCO International Institute for Educational Planning) "open resources are not much use if they cannot be found". For this reason Virtual Mobility collaboration is a key element to foster OER.

PROJECT TITLE

BATCH: Beating the Application To Cumulate Help

SUMMARY OF THE PROJECT IDEA

The main project objective is to set up team of local and virtual mobility team members to develop an innovative method for evaluate individual users learning needs in the ICT sector, provide effective resources and setting up a peer review and sharing community to ensure the quality of the contents. From the practical point of view, it is an online environment where the individual learning needs of users match selected and specifically contents, learning objects, collected from the available Open Education Resources repositories in a easy, effective and quickly way. The environment merges different existing Virtual Mobility and the most effective digitised materials offered freely. The online user community is the place where all users could evaluate the Open Education Resources selected by the system, share info and opinion about how to use, customize and finally re-use the contents.

Our target is compose by educators, students and self-learners without any restriction in terms of sector, school, higher education and vocational education, in terms of user's ages, young and adult people and role, learners/teachers/researchers interested in the field of ICT knowledge.

Coordinator: Italian University

Partners:
